B) Revue mensuelle et annuelle	123

O B J A Š N J E N J A

Meteorološki godišnjak I ima dva dela: A) Dnevna osmatranja i B) Mesečni i godišnji pregled. U delu A) objavljuju se podaci 10 odabranih stanica, i to: Ljubljana-Bežigrad, Zagreb-Grič, Split-Marjan, Bjelašnica, Sarajevo, Beograd, Novi Sad-Rimski Šančevi, Priština, Titograd i Skopje-Petrovac. u delu B) nalaze se podaci svih meteoroloških stanica osnovnih mreža.

Značenje upotrebljenih oznaka je sledeće:

φ= geografska širina, λ = geografska dužina od Griniča, ΔG = vremenska razlika u odnosu na Grinič, H_s = nadmorska visina podnožja termometarskog zaklona, H_b = nadmorska visina rezervoara barometra, h_t = visina rezervoara termometra iznad tla, h_r = visina otvora kišomera iznad tla.

Oznake pojedinih elemenata su upotrebljene prema medjunarodnim konvencijama, a vrednosti su date u ovim jedinicama:

P = vazdušni pritisak u hPa na nivou stanice; T = temperatura u ^{o}C; e = pritisak vodene pare u hPa; U = relativna vlažnost u procentima; D = pravac vetra po ruži vetra od 16 do 8 pravaca; F = jačina vetra po Boforovoj skali (0-12); v = brzina vetra u m/s ; V = vidljivost u km; N = oblačnost (0-10); insolacija = trajanje osunčavanja u satima; R = padavine u mm; h_s = snežni pokrivač u cm; W = razvoj vremena (vrsta pojave, intenzitet i trajanje) opisan medjunarodnim simbolima.

U rubrici "razvoj vremena" su upotrebljene ove skraćenice:

n = u toku noći; rj = rano jutro; dp = do podne; pp = po podne; kv = kasno veče; i = s prekidima.

Srednje dnevne i mesečne vrednosti temperature vazduha izmerene u 7, 14, i 21 h po lokalnom vremenu računate su po formuli:

$$\frac{t_7 + t_{14} + 2 \times t_{21}}{4}$$

a za ostale elemente (P, e, U, N) srednje dnevne i mesečne vrednosti dobijene su kao proste aritmetičke sredine terminskih vrednosti.

Ekstremni termometri su očitavani i uredjivani u 21 h i vrednosti ubeležavane na dan merenja.

Dnevne vrednosti padavina se odnose na protekla 24 sata, od 7 h prethodnog dana do 7 h dana merenja u koji su zabeležene.

Visina snežnog pokrivača je merena u 7 h.

U tablicama A podvučene su vrednosti maksimuma vazdušnog pritiska, temperature vazduha, pritiska vodene pare, jačine vetra kad ona iznosi najmanje 6 po Boforu, i padavina, kao i vrednosti minimuma vazdušnog pritiska, temperature vazduha, pritiska vodene pare i relativne vlažnosti.

U tablicama B za srednje mesečne ekstremne temperature vazduha upotrebljene su oznake $\overline{Max}$ i $\overline{Min}$; za rubrike broj dana sa ● ili ◑ , ✳ ili △ i ✳ prebrojani su samo dani kad je visina naznačenih padavina iznosila najmanje 0.1 mm.

Broj stanica (kolona 2 Azbučnog spiska) je ustvari redni broj niza stanica sa podacima u tablicama dela B).

Na kraju knjige nalazi se karta SFRJ sa naznačenim klimatološkim stanicama u 1984. godini čiji brojevi odgovaraju brojevima stanica sa podacima u tablicama B.

NOTICE EXPLICATIVE

L'Annuaire météorologique I a deux parties: A) Observations journalières et: B) Résumés mensuels et annuels. Dans la partie A) sont publiées les données de huit stations choisies, à savoir: Ljubljana-Bežigrad, Zagreb-Grič, Split-Marjan, Bjelašnica, Sarajevo, Beograd, Novi Sad-Rimski Šančevi, Priština, Titograd et Skopje-Petrovac. Dans la partie B) fugurent les données de toutes les stations météorologiques des réseaux de base.

La signification des symboles utilisés est la suivante:

φ= latitude, λ = longitude E de Greenwich, ΔG = différence entre l'heure locale et l'heure de Greenwich, H_s = altitude du pied de l'abri météorologique, H_b = altitude de la cuvette du barometre, h_t = hauteur, au-dessus du sol, du réservoir du thermomètre, h_r = = hauteur, au-dessus du sol, de l'ouverture de l'entonnoir du pluviomètre.

Les désignations des éléments météorologiques particuliers sont comformés aux conventions internationales. Leur valeurs sont données en unites de mesure suivantes:

P = pression atmosphérique en hPa. à la station; T = température en ^oC; e = tension de vapeur d'eau en hPa; U = humidité relative en D = direction du vent en rose des vents de 8 ou de 16 directions; F = force du vent d'après l'echelle Beaufort (0-12); v = vitesse du vent en m/s; V = visibilité en km; N = nébulosité (0-10); insolation = durée d'insolation en heures; R = précipitations en mm; h_s = épaissuer de la couche de neige en cm; W = évolution du temps (genre du phénomène, son intensité et sa durée) décrite par des symboles internationaux.

Dans la colonne "Razvoj vremena" (évolution du temps) les abréviations suivantes sont utilisées:

n = au cours de la nuit; rj = tôt le matin: dp = avant midi; pp = apres midi; kv = tard le soir; i = avec intermittence.

Les valeurs moyennes journalières et mensuelles de la température - à 7 h, 14 h et 21 h, heure locale, sont calculées d'après la formule:

$$\frac{t_7 + t_{14} + 2 \times t_{21}}{4}$$

et pour les autres élements (P, e, U, N) on a calculé les moyennes arithmétiques simples pour obtenir les valeurs moyennes journalières et mensuelles des observations de 7 h, 14 h et 21 h.

Les lectures des thermomètres à maxima et minima suivies de leur amorcage, ont été faites à 21 h et les valeurs insorites le même jour.

Les valeurs journalières de précipitations relevées à 7 h se rapportent aux 24 heures précédentes, c'est-à-dire de 7 h la veille à 7 h du jour de la lecture.

L'épaisseur de la couche de neige est mesurée à 7 h.

Dans les tableaux A sont soulignée les valeurs maxima de la pression atmosphérique, de la température de l'air, de la tension de vapeur d'eau, de la force du vent $F \geqslant 6$ (de l'échelle Beaufort) et des précipitations, ainsi que les valeurs minima de la pression atmoshpérique de la température de l'air, de la tension de vapeur d'eau et de l'humidité relative.

Dans les tableaux B pour les extrêmes moyennes mensuelles de la température de l'air les indications $\overline{Max}$ et $\overline{Min}$ ont été utilisées: dans les colonnes "Broj dana sa" (Nombre de jours avec) ● ou ◑, ✳ ou ⛆ et ❄ sont indiqués seulement les jours avec une hauteur de précipitation en question de 0.1 mm au moins.

Le numéro de la station (colonne 2 de la Liste alphabétique) est en effet le numéro d'ordre de la série des stations dont les données fugurent dans les tableaux de la partie B).

A la fin de la publication on trouvera la carte de la R.S.F. de Yuogoslavie donnant les stations climatologiques de l'année 1984; les numéros de ces stations correspondent aux numéros des stations dont les données figurent dans les tableaux de la partie B.

AZBUČNI SPISAK STANICA
PO SOCIJALISTIČKIM REPUBLIKAMA

Znak x pokazuje da stanica raspolaže odgovarajućim podacima meteoroloških elemenata navedenih u kolonama 7-14
