OBJAŠNJENJA

Godišnjak I ima dva dela: A) Dnevna osmatranja i B) Mesečni i godišnji pregled. U delu A) objavljuju se podaci 8 odabranih stanica, i to: Ljubljana—Bežigrad, Zagreb—Grič, Split—Marjan, Bjelašnica, Sarajevo, Beograd, Titograd i Skopje. U delu B) nalaze se podaci svih meteoroloških stanica osnovnih mreža.

Značenje upotrebljenih oznaka je sledeće:

φ = geografska širina, λ = geografska dužina od Griniča, ΔG = vremenska razlika u odnosu na Grinič, H_s = nadmorska visina podnožja termometarskog zaklona, H_b = nadmorska visina rezervoara barometra, h_t = visina rezervoara termometra iznad tla, h_r = visina otvora kišomera iznad tla.

Oznake pojedinih elemenata su upotrebljene prema međunarodnim konvencijama, a vrednosti su date u ovim jedinicama:

P = vazdušni pritisak u mm visine živinog stuba, reducirane na 0°C; T = temperatura u °C; e = pritisak vodene pare u mm visine živinog stuba; U = relativna vlažnost u procentima; D = pravac vetra po ruži vetra od 16 ili 8 pravaca; F = jačina vetra po Boforovoj skali (0—12); v = brzina vetra u m/sek; V = vidljivost u km; N = oblačnost (0—10); insolacija = trajanje osunčavanja u satima; R = padavine u mm; h_s = snežni pokrivač u cm; W = razvoj vremena (vrsta pojave, intenzitet i trajanje) opisan međunarodnim simbolima.

U rubrici „Razvoj vremena" su upotrebljene ove skraćenice:

n = u toku noći; a = pre podne; p = posle podne; i = s prekidima.

Srednje dnevne i mesečne vrednosti temperature vazduha izmerene u 7, 14 i 21 h po lokalnom vremenu računate su po formuli

$$\frac{t_7 + t_{14} + 2 \times t_{21}}{4},$$

a za ostale elemente (P, e, U, N) srednje dnevne i mesečne vrednosti dobijene su kao proste aritmetičke sredine terminskih vrednosti.

Ekstremni termometri su očitavani i uređivani u 21 h i vrednosti ubeležavane na dan merenja.

Dnevne vrednosti padavina se odnose na protekla 24 sata, od 7 h prethodnog dana do 7 h dana merenja u koji su zabeležene.

Visina snežnog pokrivača je merena u 7 h.

U tablicama A masnim znacima su obeležene vrednosti maksimuma vazdušnog pritiska, temperature vazduha, pritiska vodene pare, jačine vetra kad ona iznosi najmanje 6 po Boforu, i padavina. Kurzivom su obeležene vrednosti minimuma vazdušnog pritiska, temperature vazduha, pritiska vodene pare i relativne vlažnosti.

U tablicama B za srednje mesečne ekstreme temperature vazduha upotrebljene su oznake $M\overline{ax}$ i $M\overline{in}$; za rubrike broj dana sa ● ili ●, ✳ ili △, i ❄ prebrojani su samo dani kad je visina naznačenih padavina iznosila najmanje 0.1 mm.

Broj stanica (kolona 2 Azbučnog spiska) je ustvari redni broj niza stanica sa podacima u tablicama dela B).

NOTICE EXPLICATIVE

L'Annuaire I a deux parties: A) Observations quotidiennes et B) Résumés mensuels et annuels. Dans la partie A) sont publiées les données de huit stations choisies à savoir: Ljubljana—Bežigrad, Zagreb—Grič, Split—Marjan, Bjelašnica, Sarajevo, Beograd, Titograd et Skopje. Dans la partie B) se trouvent les données de toutes les stations météorologiques des réseaux fondamentaux.

Les notations employées sont les suivantes:

φ = latitude, λ = longitude E de Greenwich, ΔG = différence entre l'heure locale et l'heure de Greenwich, H_s = altitude du pied de l'abri thermométrique, H_b = altitude de la cuvette du baromètre, h_t = hauteur, au dessus du sol de la base du thermomètre, h_r = hauteur, au dessus du sol, de l'entonnoir du pluviomètre.

La désignation des éléments météorologiques et les unités de mesure sont conformes aux conventions internationales.

P = pression atmosphérique en mm (hauteur de la colonne du mercure reduite à 0°C); T = température en °C; e = pression de la vapeur d'eau en mm (hauteur de la colonne de mercure); U = état hygrométrique (humidité relative); D = direction du vent en rose de 8 de 16 directions; F = force du vent d'après l'échelle de Beaufort (0—12); v = vitesse du vent en m/s; V = visibilité en km; N = nebulosité (0-10); insolation = durée d'insolation en heures et dixièmes; R = précipitations en mm; h_s = épaisseur de la couche de neige en cm; W = description du temps (indication du phénomène, son intensité et sa durée) en utilisant les symboles internationaux.

Des précisions sont données par les abrévations suivantes:

n = pendant la nuit; a = avant midi; p = après midi; i = en intervalle.

Les valeurs moyennes da la température quotidiennes et mensuelles — à 7 h, à 14 h et 21 h — sont calculées d'après la formule:

$$\frac{t_7 + t_{14} + 2 \times t_{21}}{4},$$

et pour les autres éléments (P, e, U, N) on calcule les valeurs moyennes quotidiennes et mensuelles des observations faites à 7 h, 14 h et 21 h.

Les lectures des thermomètres à extrêmes, suivies de l'amorçage de ces thermomètres, ont été faites à 21 h et les valeurs incrites à la journée de la lecture.

Les valeurs quotidiennes des précipitations relevées à 7 h sont celles de 7 h la veille à 7 h le matin.

L'épaisseur de la couche de neige est mesurée à 7 h.

Dans les tableaux A sont marquées en caractères gras les valeurs maxima de la pression atmosphérique de la température, de la pression de vapeur d'eau, de la force du vent $F \geqq 6$ (de l'échelle Beaufort) et des précipitations.

Dans les tableaux B pour des extrêmes moyens mensuels de la température de l'air sont emplyées les indications $M\overline{ax}$ et $M\overline{in}$; dans les rubriques de mêmes tableaux „Broj dana sa" (Nombre de jours avec) ● ou ●, ✳ ou △, et ❄ sont énumérés seulement les jours quand la hauteur des précipitations était au moins 0.1 mm.

La numéro de la station (colone 2 de la Liste alphabétique) est en effet le nombre ordinal de la série des stations avec les données dans les tableaux de la partie B).

AZBUČNI SPISAK STANICA
PO NARODNIM REPUBLIKAMA

Znak x pokazuje da stanica raspolaže odgovarajućim podacima meteoroloških elemenata navedenih u kolonama 7—14.

AZBUČNI SPISAK STANICA

PO NARODNIM REPUBLIKAMA

Znak x pokazuje da stanica raspolaže odgovarajućim podacima meteoroloških elemenata navedenih u kolonama 7—14.

STANICA	Broj stanice	Nadmorska visina H_m	Geografska širina φ^0 N	Geografska dužina λ^0 E Gr.	Red stanice	Vazdušni pritisak	Temperatura vazduha	Vlažnost vazduha	Vetar	Oblačnost	Insolacija	Padavine	Broj karakterističnih dana
